

Citations are added within the body of the text by using bracketed numbers that refer to the works cited page.

This information is from the first source [1].

This information is from the second source. This is as well, and it is about the same topic, so it shares a citation with the previous sentence [2].

This information is from the third source [3]. Although this additional information is also from the third source, it is a different topic. There are two citations, to be clear that the unrelated information comes from the same source [3].

Images are cited within their captions.

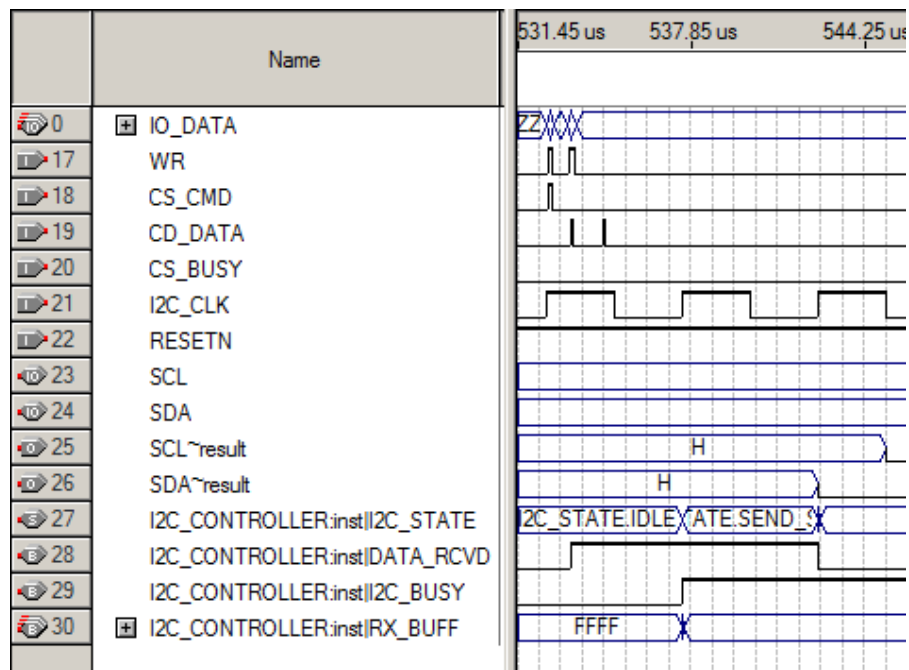

Figure 1. Usual figure caption [4].

Equations are cited in the body text where the equation is used.

$$A^2 + B^2 = C^2 \quad [\text{Eq 1}]$$

(The word "equation" should only be used at the beginning of a sentence)

Equation 1 computes the length of the hypotenuse [4].

(Otherwise, just use the equation number)

As shown in (1), the square of C is equal to the sum of the squares of A and B [4].
